

| Purpose and General Selection Guidance

Core Shack at the PDAC Convention seeks to feature new discoveries of economic deposits to provide education for attendees and compliment overall technical programing at the Convention through displaying recently drilled core. While geologically interesting settings can be of value to PDAC attendees, the focus of the Core Shack is on deposit potential.

The Core Shack seeks to provide attendees exposure to a range of deposits. When selecting applicants, the Selection Committee considers the following factors:

1. Diversity of commodities
2. Geographic diversity
3. Deposit model diversity
4. Exposure to previously overlooked types of deposits and commodities

To maintain economic relevance, the Selection Committee also looks to market factors such as currently favourable commodities and/or geographic regions.

| Tips for Applicants

1. Please ensure to fill out all aspects of the application. Incomplete applications will not be reviewed.
2. Supply specific photos of core to be displayed. A web link to the company's website or corporate presentation is not sufficient. Applications with no core photos will not be considered by the Committee.
3. Core to be displayed must be drilled by the time of the application. Future intentions to drill will not be considered by the Committee.
4. Applications should focus on describing why the discovery would be interesting to the technical community.
5. Responses should be specific to the discovery/deposit the company is applying for. Applicants should avoid discussing the company or other properties the company is conducting work on.
6. Projects will not be selected to present in consecutive years, unless significant work or discovery has been made.
7. Core Shack exhibitors should be prepared to staff their booth with their exploration geologists to explain and answer questions and talk to others.
